EX. NO: 1 Date:	PREPARE PROBLEM STATEMENT FOR ANY PROJECT

AIM: To prepare problem statement the project titled "Primary Health Centre (PHC) Monitoring and Management System."

REQUIREMENTS:

Hardware Interfaces

- Processor: Intel Core i7-14700K
- RAM: 16 GB
- Monitor with suitable display resolution
- Keyboard and mouse

Software Interfaces

- Operating System:Windows 11
- Microsoft Word

THEORY:

Primary Health Centres (PHCs) serve as the first point of contact between the public and the healthcare system, particularly in rural and semi-urban regions. They are responsible for delivering essential healthcare services such as outpatient treatment, maternal and child healthcare, immunization programs, disease prevention initiatives, and health awareness campaigns.

Despite their importance, many PHCs face operational challenges due to increasing patient volumes, limited resources, and fragmented record-keeping practices. Healthcare administrators often encounter difficulties in monitoring patient visits, tracking medicine availability, managing staff activities, and maintaining accurate healthcare records. Delays in reporting and lack of timely information can affect decision-making and the quality of healthcare services provided to the community.

Efficient monitoring of healthcare facilities is essential to ensure that resources are utilized effectively and that healthcare services remain accessible to all citizens. Government agencies and healthcare authorities require accurate information regarding the functioning of PHCs to evaluate healthcare programs, identify shortcomings, and plan future improvements. Therefore, understanding the existing challenges in PHC operations is an important step in defining the requirements of a healthcare management project.

A problem statement provides a clear description of the issues faced by stakeholders without proposing specific solutions. It serves as the foundation for requirement gathering and system development by identifying the needs and expectations of the users involved.

Conclusion:

The problem statement for the project **"Primary Health Centre (PHC) Monitoring and Management System"** was prepared successfully. The existing challenges, operational issues, and requirements associated with Primary Health Centres were identified and documented, providing a basis for the Requirement Engineering process and future system development.
